Allowable subject matter

Claims 1-36 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art neither discloses nor suggests the following limitations, in combination with the remaining elements as disclosed in claims 1, 14, 31:

- the control device having a current sensing terminal and an output terminal, the current sensing terminal being electrically connected to a junction between the second end of the switch and the negative contact, the output terminal being electrically connected to the switch, the control device causing the switch to break electrical connection across the switch when voltage at the current sensing terminal exceeds a threshold value, and causing the switch to provide electrical connection across the switch after a non-conduction period has elapsed following the causing the switch to break electrical connection such as required by claims 1, 14 and 31.

Proper motivation has not been found in any prior art for combining limitations to disclose the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kim et al. (6,841,941) discloses a brightness controllable flashlight comprising a IC for controlling three light emitting diodes. Chun (6,793,366) discloses a low power LED flashlight comprising a plurality of white LED and drive switches. Rachwal (6,388,390) discloses a flashlight comprising a MOSFET for driving a LED. Goodale Jr et al. (5,894,200) discloses a IC comprising a MOSFET for driving an incandescent lamp.

The prior arts as cited above do not disclose the claimed invention.
